

# EFFICIENT SMART SAFE

## E-FLEX EASY FLEXITANK

### E-FLEX

Edible oils, wine, juices, non-hazardous chemicals, and for water up to 27,000 L capacity.

VOLUME	MATERIALS	FILLING / DISCHARGE	REPEAT USE
12,000 to 27,000 Litres	ANY Non-Hazardous liquid	Valve: bottom load. No bulkheads allows Flexitank to go up during loading. Standard valve: 3" male camlock. 2" adaptor : On request.	NO

*One of our bestselling products, the E-Flex flexitank is a tank designed to outshine its competition in the shipping process. With a higher capacity, ability to use almost any container, faster fitting process, and guaranteed no bulging feature, E-Flex is the way to go if you're looking for the most cost-effective way to transport high volumes of liquid safely and efficiently.*

E-Flex tanks are the highest capacity flexitank on the market. The 27,000 capacity allows for about 12% savings on overall freight costs thanks to the increased payload size. You can load base oils, palm oils, stearin, olein, soybean oil, olive oil, canola oil, vegetable oil, sunflower oil fish oil, used cooking oil and biodiesel making use of our high capacity flexitank.

A common problem with flexitanks is that they put pressure on the sidewalls of containers, causing bulging. After thousands of E-Flex shipments, there has not been a single recorded case of container bulging having been caused by the E-Flex flexitank. E-Flex supports the entire burden of the cargo by itself, so any container can be used to transport the E-Flex flexitank.

Not only is the E-Flex design safe to transport despite its lack of a rigid bulkhead, its integrated restraint system helps stabilize the liquid contents. Our anti-wave technology allows the E-Flex to control the movement of liquid and avoid accumulation of energy through the harnessing system: in other words, the tank is able to absorb forces that are applied to it during the shipping process and protect its contents. E-Flex has been successfully tested in Pueblo, CO, USA according to international norm of PAS 1008-2016 and certified by Container Owners Association.

#### **What sizes are E-Flex available in?**

E-Flex comes in 4 different sizes to enable loadings ranging from 12,000 litres to 27,000 litres. 27,000 litre size is the highest capacity on the market and E-Flex is the only flexitank that can load such capacity.

#### **Which cargo can I transport with the E-Flex?**

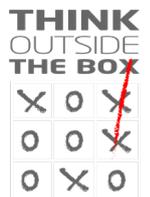

E-Flex works with almost any non-hazardous liquid. Our flexitanks are manufactured with food products in mind, so they are ideal for cargos of juices, oils, and wines as well as chemicals. Before we approve your cargo, we will need to see the MSDS (material safety data sheet) to ensure that the substance is safe to transport.

#### **Where is the valve located, and what size is it?**

The design of our flexitanks is more advanced and innovative than competitors in the industry. Our valve is bottom load. Our standard valve is 3" male camlock. An adaptor to reduce it to 2" is available upon request.

#### **Is E-Flex approved by major shipping lines?**

E-Flex is approved by all major shipping lines and is used in over 50 countries worldwide.

Preparing the E-Flex

Filling the E-Flex

## DUAL E-FLEX

Ability to load two different types of products in the same flexitank/ container.

### USAGE / PREPARATION / STORAGE

Ideal for juices, oils, and wines as well as chemicals. Before we approve cargo, we will need to see the MSDS (material safety data sheet) to ensure that the substance is safe to transport.

### Can I transport two different liquids in one Flexitank?

The **Dual E-Flex** flexitank is built precisely so that you can load two different products in the same tank. For example we can load red wine and white wine in the same flexitank.
